

Remote Sensing

The satellite image in Figure 7-6 on page 71 shows southeastern United States and the Gulf of Mexico.

[1] What type of weather does the image show?

[2] Why are satellite images more useful than local weather radar in this case?

[3] What is the location of the storm? Be specific.

[4] What information about the storm could be gained by comparing this image with one taken a few hours earlier?

[5] How is the information gathered about the storm useful for the people living in the area?
